ERESCOPE 702 OPTICAL WIRELESS LINK

When **Walser Automotive** purchased a dealership located down the street from their Nissan dealership in Burnsville Minnesota for their new Isuzu dealership there was a problem: "How do we 'close' on the new facility on a Friday and open the following Monday morning with *both* phone and data services at the new site?"

WALSER ISUZU

Solution: Install an IP Telephony Card in the InterTel PBX at the Host Site, install InterTel IP phones at the Remote Site and plug the workstations at the Remote into the IP Phones, and then last (but certainly not least) order a zero latency high bandwidth optical wireless link (Free Space Optics) from System Support Solutions to connect the two sites.

Benefits:

1. Eliminate PBX and its support costs at the remote site
2. Eliminate voice mail system and its support at the remote site
3. Eliminate network server, operating system, backup, support and administration etc. etc. at remote site
4. Eliminate phone lines at the remote site (and the wait for service)
5. Eliminate Internet access at the remote site

APPLICATION

Location: 501 Burkhard Drive, Burnsville MN USA	Company: Walser Automotive
Protocol: Ethernet Interface: CAT5	Data Rate: 10 Mbps
Distance: 100 meters	Mounting: Outside corner of structures
